

“This program truly helped me learn all of the functions that were a part of it. I came in with almost no knowledge of Excel and now feel much more confident in my skills.”

Abigail (Student)

- Lead instructor for the CQS 111 course
- After multiple assessments, the final test consisted of 97 modules covering all topics that students learned throughout the CQS 111 course. This includes navigational tools, formatting options, formulas, tables, charts and PivotTables/PivotCharts. Results showed that 91% received a 90 or higher and 94% with an 80 or higher versus significantly lower scores before using ExPrep.
- Students stated they feeling more confident, knowledgeable and capable using Excel.

Problem

Professor John MacDonald previously used another product as a training and testing tool for his class. However, he found the program to be inefficient and ineffective as students struggled to grasp different Excel topics.

Solution

MacDonald evaluated alternative Excel training programs and decided to partner with ExPrep due to their training methods and tracking capabilities. ExPrep's interactive training course, tracking/measurement capabilities and customizable assessments allowed Macdonald to effectively prepare, monitor and test his student throughout the course.

Result

ExPrep also saw student efficiency levels increase. Upon comparison of the assessment charts provided below, students gradually became more efficient as the semester progressed. On average, students decreased time spent on tasks by more than half. During the pre-assessment, students were spending approximately 4 minutes per task on average, but by the final assessment, students spent under 2 minutes per task.
